

CloudStorage for Amazon S3

Integrated Storage Solution for NetSuite

Access Amazon S3™ Directly from within NetSuite®

Celigo's CloudStorage for NetSuite combines best-of-breed cloud services by providing organizations with a powerful, intuitive interface to Amazon's Simple Storage Service (S3) that integrates seamlessly into NetSuite. The combined solution is based on NetSuite's SuiteCloud development platform, providing an alternative to NetSuite's built-in storage, with advanced data and file management features.

Take Advantage of Amazon's Cost Effective Storage

CloudStorage gives NetSuite customers direct access to Amazon S3's inexpensive, reliable, highly scalable data-storage infrastructure. It can be used by any NetSuite customer with advanced storage requirements, and is especially useful for large volumes of data, including contracts, images, video, log files, and software downloads.

Intuitive User Interface Increases User Adoption

Managing your organization's NetSuite-related storage needs has never been easier. Using CloudStorage for NetSuite, you can now extend NetSuite's native document management functionality easily and inexpensively.

Safety & Security

CloudStorage works with permissions you have crafted for your NetSuite Roles (both standard and custom). Files attached to business objects, such as invoices or vendor bills, can be accessed only if a user already has access to that record in the NetSuite user interface.

Safety & Security

Celigo doesn't resell Amazon S3 storage, or control your access to it. Because you procure and manage it yourself, your organization can access your information outside of NetSuite, allowing other web applications to use it.

“ CloudStorage has enabled us to meet our objective of operating completely from the cloud. We have replaced our expensive on-premise servers with the seamless file sharing capabilities of CloudStorage without the issues, which is what drove us to move our ERP system off our antiquated servers in the first place. It was the final nail in the coffin of our on-premise model. ”

Key Features

Virtually Unlimited Storage & Scalability

CloudStorage for NetSuite lets organizations manage any type of media, including signed agreements, videos, images, database backup files, customer log files, and software downloads, without concern for storage limitations. Amazon S3 provides a highly durable storage infrastructure, storing data redundantly across multiple devices and facilities at Amazon. Its scalability and low cost means virtually unlimited storage, including support for large files of up to 2GB.

Seamless Integration with NetSuite

Users can upload, download, share, modify, delete, and attach files within most NetSuite record types—including customers, quotes and support cases. CloudStorage for NetSuite simplifies uploading multiple files and searching for existing files through an advanced user interface.

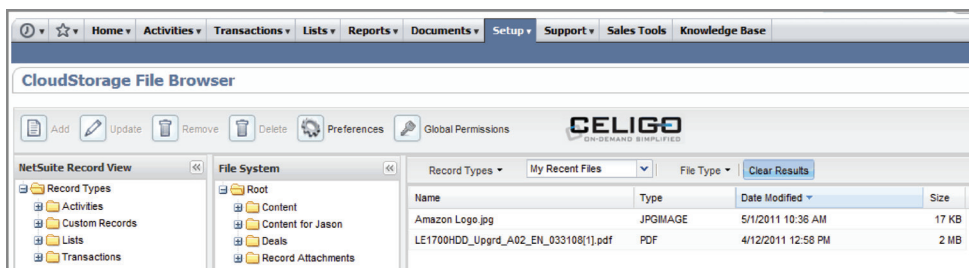

Celigo's customized interface is available on most NetSuite records out of the box, and works much like the native NetSuite File management functions. This means end-users will find it easy to Add, Attach, View, Update, Remove, or Delete files with NetSuite records that are being stored on Amazon S3.

Powerful File Management

A sophisticated file browser balances elegance and practicality by simplifying workflows, while providing enough muscle to satisfy the most tech-savvy power user. Users can find and interact with their data in variety of ways, including enhanced search results, drag-and-drop file trees, associations with business objects, and a grid view of recently used files. CloudStorage for NetSuite also has advanced filtering capabilities—by record type, file type (images, documents, videos, etc), file extension, file size, specific dates and date ranges, and file name.

Deploys in Minutes

CloudStorage sets up quickly, leveraging NetSuite's SuiteBundler software packaging system. Customers can start using the service simply by signing up for Amazon S3, installing the CloudStorage SuiteBundler within NetSuite, and entering their Amazon user information within a NetSuite configuration panel. The entire solution can be up and running in less than 30 minutes.
