

# CloudExtend for Google Apps

Sync Google Apps with NetSuite

## Sync Gmail, Docs, Calendar, and Contacts

Celigo CloudExtend for Google Apps enables true cloud-to-cloud synchronization of your Gmail, calendars, docs, and contacts with NetSuite records.

NetSuite customers are already successfully running their core business functions online, and many of them are looking to Google Apps for Business for managing Email, calendars, documents, and contacts. The only problem is how to synchronize information between the two solutions.

- Do you want to attach Gmail messages to NetSuite records within Gmail?
- Would you like to have NetSuite-created events appear instantly in your Google Calendar, including location, acceptance status, and more?
- What if you could create a new Google doc from within NetSuite?

CloudExtend for Google Apps lets you do all of the above and more.

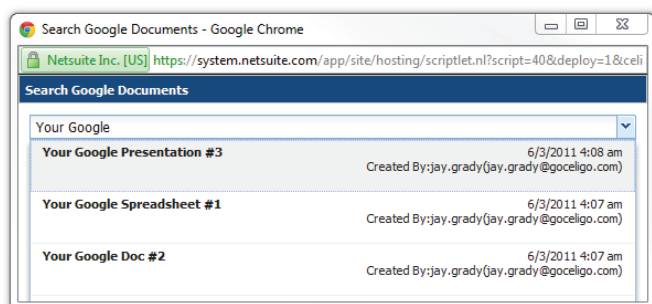

## True Cloud-to-Cloud Integration

CloudExtend for Google Apps doesn't rely on a local server or desktop solution to attach emails, manage calendar events, and create and manage documents. The solution is designed to work entirely from within the cloud.

Built using NetSuite SuiteBundle technology, CloudExtend installs from Celigo's NetSuite instance into yours. It can be configured and working in as little as 30 minutes.

## Do More With Your Google Apps Content

Celigo's CloudExtend for Google Apps can dramatically increase end-user productivity and let your business start doing more with Google Apps content. Spend less time saving local copies, managing versions, and uploading to NetSuite. Focus on your customer relationships and collaboration instead of managing files and email messages.

## KEY BENEFITS

- > Locate NetSuite records and attach email messages from Gmail
- > Create Google Docs and attach them to NetSuite records
- > Eliminate data re-entry in Calendars. View Google events in NetSuite
- > Saves time, with seamless navigation between Google and NetSuite
- > Do everything in the Cloud. Access your content from anywhere

## SPECIFICATIONS

- > NetSuite SuiteBundle and Google Gadget make up the solution
- > Requires Google Apps for Business
- > Specific role and security permissions are required
- > Supports all versions of NetSuite

## FREE 14 DAY TRIAL

- > Fully featured trial
- > Each component installs in minutes

## Key Features

### Gmail

Celigo's contextual search gadget loads when you view an email, scans the sender's email address and message body content, and automatically pre-populates NetSuite search results in real time. Once located, your NetSuite data can be created or edited directly from within the Gmail Gadget. The ability to type in new search criteria to refresh the results makes it a must-have tool for NetSuite customers and end users.

### Calendar

Synchronize your Google and NetSuite calendars automatically with CloudExtend for Google Apps. When an event is created in your NetSuite calendar, it appears immediately in your Google Calendar. When appointments are made in Google, they automatically appear in NetSuite. Attributes such as acceptance status, recurring events, notes, and meeting location are also synchronized between the two. In addition to syncing common fields, it maps advanced recurrence patterns for events in both directions.

### Docs

Use CloudExtend to locate, attach, and edit Google Apps documents, spreadsheets, and presentations from within NetSuite. You can also create new Google documents, or upload existing documents from your desktop and automatically convert them to Google documents with a few clicks. Additional file types, including images, PDFs, and more can also be located and attached to NetSuite records.

### Contacts

Manage all of your NetSuite and Google Contacts in one place. Whether you're updating a phone number in Google Contacts or creating a new entry in NetSuite, Celigo CloudExtend for Google Apps will ensure that all of your information stays in sync.

### Security Via Open ID

NetSuite's built-in support for Open ID means NetSuite users only need to provide their login credentials once. Once established, all future login sessions are managed between Google and NetSuite, ensuring the safety and security of your data.

## PRICING

- > Annual subscription of \$3,600
- > Gmail, Calendar, and Docs available individually for \$1,200
- > Contacts requires Gmail Sync
- > CloudExtend installation and setup available for \$1,500

“ We saw immediate benefits from using Gmail Sync. Emails to and from customers and vendors were stored in NetSuite for reference. New contacts and customers were added and tracked, which increased sales activity. Efficiency has been improved greatly with the ability to quickly add and store information. ”

— Stephen Mulcahy  
IT Department  
Noble Supply & Logistics

“ Celigo's Google calendar sync product provides us with seamless integration between NetSuite and Google. Now our staff has the option of using either calendar without worrying about keeping separate calendars up to date. Events are assigned to customers in NetSuite and Google's tools allow us to easily sync calendar events to our mobile devices. It's the best of both worlds. We have been so impressed with the product that we're now getting excited about testing Celigo's Google Mail integration for NetSuite. ”

— Mark Petzold  
Director of Information Technology
