

Integrator

A NetSuite Bundle

Integration Toolkit Specifically Designed for NetSuite

The Celigo Integrator is a NetSuite Bundle specifically designed for NetSuite integrations. It installs in minutes, provides several out of the box UI driven data flows, and **uniquely** enables you (as a SuiteFlex developer) to build and maintain your NetSuite integrations directly on the SuiteFlex platform with familiar, native NetSuite technologies. Using the Celigo Integrator, your NetSuite integrations will run faster and the user experience will be seamless.

With more than two hundred customers and tens of thousands of transactions processed every day, the Celigo Integrator is a proven tool for integrating any other application with NetSuite.

KEY BENEFITS

- > Integrates anything with NetSuite
- > Installs in minutes via a Bundle
- > Interacts with user actions in real-time, and displays errors as they happen, where they happen
- > Familiar NetSuite technologies used to build and maintain integration data flows
- > Provides multiple prebuilt connectors for third-party business application connectivity
- > Supported by a company with deep integration and NetSuite domain expertise
- > Supports enterprise-strength integration with large transaction volumes

Prebuilt Connectors

Salesforce.com • Google • Amazon.com

Business Applications

CRM • ERP • 3PL • Manufacturing • Custom Apps

Business Services

Suppliers • Partners • Banks

Data Exchange

Database • Flat Files • Web Services

“ When we made the switch to NetSuite, we had a large volume of historical data to import. The Integrator made light work of this task, allowing us to import huge volumes of data without massive overhead for our staff. One of the best features of the importer is the real-time error reporting. This saved us endless hours as we were able to clean up our data and fix errors without having to wait for the entire import to complete. On an ongoing basis, the Integrator saves us time and money by allowing us to easily update records on-mass and run routine data updates from other systems. ”

— Noah Parsons, COO,
Palo Alto Software

Key Features

The Celigo Integrator is purpose-built for NetSuite from the ground up. It extends NetSuite's one-system, no-limits vision to the maximum extent by being built directly on the SuiteFlex platform. It is available immediately via a Bundle install, and it is backed by an industry first SuiteFlex development toolkit—Celigo SDK.

Better Architecture

Celigo has evolved from the traditional ETL (Extract, Transform, and Load) approach to implementing NetSuite integrations. Now, integrations are built directly on the SuiteFlex platform, where familiar NetSuite technologies like RESTlets, Suitelets, SuiteScripts, Saved Searches, and Workflows are used to implement and maintain integration data flows. With this approach, integration logic runs right alongside core NetSuite business logic; errors are reported where they happen, when they happen; and performance is enhanced by skipping the traditional middleware and connecting NetSuite directly with the applications it is being integrated with.

Better User Experience

Integrations are designed to interact directly with NetSuite end users, as actions occur on the page, not just after the fact in another system's integration processing logic. Performance is enhanced by skipping the traditional middleware and connecting NetSuite directly with the applications it is being integrated with. Metrics, errors, and integration activity are all reported with familiar NetSuite technologies like Saved Searches, Dashboards, and Email Alerts; and everything links to actual NetSuite data. The Celigo Integrator does more than just integrate applications with NetSuite, it unifies them.

Better Developer Experience

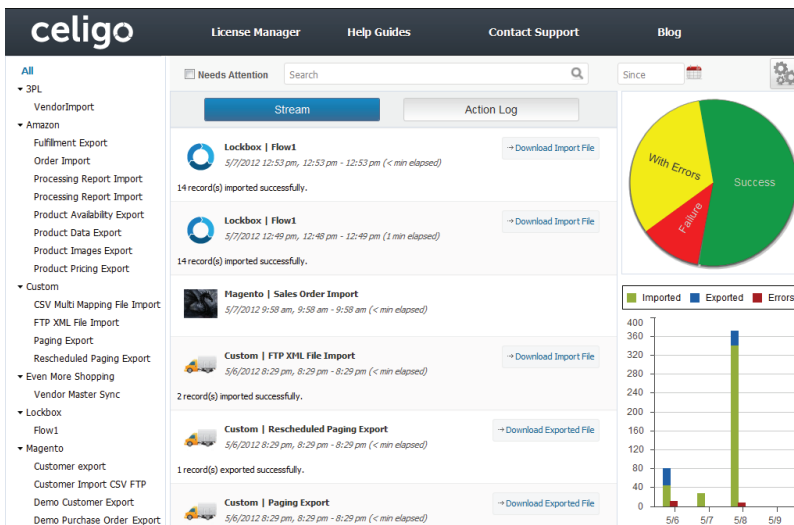

The Celigo Integrator uniquely enables you (as a SuiteFlex developer) to build and maintain your NetSuite integrations directly on the SuiteFlex platform with familiar, native NetSuite technologies. There are no third party applications to manage. There are no third party technologies to learn. It's all NetSuite, and anyone that knows NetSuite can help build and maintain your NetSuite integrations.

All the Same Great Basics

The Celigo Integrator supports integration logging, data mappings, multiple transport protocols, graphical metrics, and the ability to program custom business logic. Logging is displayed on individual records and in a centralized dashboard. Mappings are supported for CSV, XML, JSON, Fixed Width, EDI, SOAP, and more. Supported transport protocols include HTTP(S), Web Services, FTP(S), Database, and more. Graphical metrics display import and export counts in addition to overall integration health. And custom business logic can be injected anywhere with native NetSuite SuiteScripts.

Integration-as-a-Service

The Integrator is offered as a managed subscription that includes regular updates and support. All hosted services run on NetSuite or Rackspace world-class infrastructure. All updates are rigorously tested and transparently released to your NetSuite account.

PRICING

- > Annual subscription of \$2,400 and above
- > One-time setup fees start at \$2,000

“ Our experience at Magellan (MiTAC Digital Corporation) with Celigo and the Integrator was very positive and excellent. We achieved our key timeline objective by cutting the integration project time from several months down to less than 45 days. The Celigo integrator provided an easy way to integrate NetSuite with Oracle E-Business Suite. We are very thankful that our highly customized system was able to be integrated by Celigo. The subscription model worked great for us to address ongoing changes to our configuration as our business needs evolved over time. The Celigo Team was responsive to our needs and changes would only take a small amount of time when we had them. To top it off, the Celigo Integration Dashboard inside NetSuite let us quickly see all critical aspects of the integration as well. ”

— Renato Siljeg,
VP of Information Technology, Magellan
